What to Expect in This Module

ListView basics

Using ListView with LINQ

Displaying a custom class

Data Binding

Multiline display with TextCell

Customizing ListView appearance

Summary

- ListView displays lists of data
- Can display content from any source that implements `IEnumerable<T>`
- By default content of custom classes displayed by calling `ToString`
- Support data binding
- TextCell provides efficient way to display two-lines per row content
- ViewCell provides mechanism for customizing appearance
